Die Zahnung (Abstand = 1 mm) ist auf Zugwirkung angeordnet. Eine Längsriefung (0,5 mm) teilt diese in zwei parallel stehende Zahnreihen. Die Knorpelhaul wird dadurch ausreichend eingeritzt.

The toothing (1 mm interval) is designed to exert a traction force. A longitudinal channel (0.5 mm) divides it into two parallel rows of teeth. This ensures that the perichondrium is sufficiently scratched.

El dentado (distancia = 1 mm) está dispuesto sobre un efecto tractor. Un estriado longitudinal (0,5 mm) lo divide en dos filas dentadas paralelas. El pericondrio se entalla de este modo suficientemente.

La denture (écart 1 mm) est disposée de manière à inciser lorsqu'une traction est exercée sur l'instrument. Une rainure longitudinale (0,5 mm) sépare la denture en deux dentures parallèles, ce qui permet d'entailler la peau qui recouvre le cartilage.

La dentellatura (distanza = 1 mm) è predisposta per la trazione. Una scanalatura longitudinale (0,5 mm) la divide in due righe di denti paralleli. Ciò consente di incidere a sufficienza la cartilagine.

Die Lichtleistung von Xenonlampen ist um ein mehrfaches höher als die einer Kryptonlampe. Ein weiterer Vorteil von Xenonlampen ist deren "weißes Licht", das von den Mund- und Rachenschleimhäuten weniger absorbiert wird und die Kontrastdarstellung verbessert.

The intensity of the light of xenon lamps is several times higher than that of krypton lamps. Another advantage of xenon lamps is their "white light", which reduces the light absorption of the mucosa and improves the contrast effect.

La potencia luminosa de las lámparas de xenón es mucho mayor que la de las lámparas de criptón. Otra de las ventajas de las lámparas de xenón es su "luz blanca" que es menos absorbida por la mucosa bucal y faringea mejorando así la visualización de contrastes.

La puissance de lumière des lampes xénon est beaucoup plus grande que celle des lampes krypton. Un autre avantage des lampes xénon est leur "lumière blanche" qui est moins absorbée par la muqueuse buccale et par la muqueuse pharyngienne et mène donc à un graphique de contraste amélioré.

La potenza luminosa delle lampadine xenon è maggiore a quella di una lampadina krypton. Un altro vantaggio della lampadina xenon è la "luce bianca", che viene meno assorbita dalla mucosa faringea e dalla mucosa orale e produce un contrasto migliore.

Durch adaptierten Druck entsteht ein flaches, flexibles Knorpelfließ welches vielfältig einsetzbar ist.

Due to an adapted pressure a flat, flexible cartilage transplant is obtained, which can be applied in various manners.

Mediante una presión adaptada se crea un tejido de cartílago plano y flexible el cual puede ser empleado de diversas maneras.

Une pression adaptée permet de créer un ruisseau de cartilage plan et flexible qui peut être posé variablement.

Mediante una pressione adatta si crea un tessuto di cartilagine piano e flessibile, il quale può essere utilizzato in modi diversi.

Jeweils ein Arbeitsende der Raspeln arbeitet auf Schub, das andere auf Zug.

One working end of the rasp operates by pushing, the other by pulling.

Una parte de las raspas trabaja a empuje, la otra parte a tracción.

Un bout des râpes coupe en poussant, l'autre en tirant.

Una parte lavorativa della raspa funziona da spinta e l'altra da trazione.

Die Knochenspäne werden durch die Perforationen nach außen abgedrängt, wodurch die Raspeln nicht verstopfen und einfacher zu reinigen sind.

Bone splinters are pushed through the perforated working ends. This avoids plugging of the rasps and they can be cleaned easily.

Las raspaduras de huesos son apartadas por las perforaciones hacia fuera; así no se atascan los raspadores y pueden ser limpiados más fácil.

Les copeaux d'os sont poussés vers l'extérieur à travers les perforations, ceci évite un bouchage et facilite un meilleur nettoyage.

I trucioli delle ossa verranno eliminati fuori dalla perforazione poichè le raspe non si otturano e sono facilmente pulibili.

Die sehr flachen Raspelblätter sind einzeln ersetzbar und gewährleisten auf effiziente Weise immer ein scharfes Instrument.

The very flat, individually replaceable rasp blades are an efficient way of always ensuring a sharp instrument.

Las hojas de la raspa muy planas pueden ser utilizadas por separado y garantizan de forma eficaz que uno dispone siempre de un instrumento adecuadamente afilado.

Les lames de râpes sont interchangeables et disponibles à l'unité. Ce qui assure à l'instrument un parfait tranchant.

Gli inserti di raspa molto fine sono sostituibili singolarmente e garantiscono in modo efficace uno strumento sempre tagliente.
